**1** BizAI receives any content including non-standard formats (ie; email, image, scanned docs, audio files, etc.). and prepares them for processing.

2 Through a combination of research and proprietary techniques BizAI processes all content with accuracy and consistency across multiple LLM models and model hosts.

3 Unstructured data is transformed into a structured, consumable payload for downstream workflow solutions (ie; JSON file).

4 As a REST API gateway, BizAI connects to downstream or upstream applications. Pre-built connectors accelerate the integration process.
