

# BizAI Use Case: Purchase Contract Process Automation

## INDUSTRY

Residential Mortgage Lending

## ORGANIZATION

Mid-sized, privately held mortgage lender based in the US

## PROCESS AREA

Loan Origination – Loan Estimate (LE) Preparation

## 01 Challenge

**Purchase Contracts** are long, unstructured agreements that **define the core economics of a home purchase**—property details, parties, contingencies, personal property, fees, and who pays what. Lenders must rapidly interpret and validate this information to produce an accurate Loan Estimate (LE) **within three business days of application** based on TRID tolerances.<sup>1</sup>

When **contract terms or fees are missed or underestimated**, lenders typically absorb the difference as tolerance cures and other overages at closing—costs that add up quickly. **Accurate, timely interpretation** of Purchase Contracts isn't just an **operational imperative**—it's a significant P&L risk.

### The Results:

- Multiple teams performing “**stare & compare**” reviews on thousands of loan applications and fundings per month
- **Revenue leakage** from inflated or inaccurate estimates (e.g., missed Transfer Tax obligations)
- Significant **expense from unnecessary “Cures”** due to inaccurate fee quotes/estimates provided by the Lender in the LE
- **Document inconsistency** across real estate markets and agents
- **Turnaround delays** that impact borrower experience and compliance timelines

**Lenders need a way to automate the ingestion and normalization of purchase contracts data to build accurate, compliant Loan Estimates at scale.**

## 02 Fisent BizAI Solution

BizAI automates the processing of Purchase Agreement packages—extracting, standardizing, and validating data needed to generate compliant Loan Estimates.

### BizAI Actions Used:

**Classify** incoming contracts, addenda, and attachments for processing

**Verify** completeness of required fields and flag ambiguous clauses for review

**Split** multi-property or multi-page packages into relevant sections

**Analyze** extracted data to produce LE-ready summaries for downstream systems

**Extract** key data fields including purchase price, transfer taxes, seller credits, and cost allocations

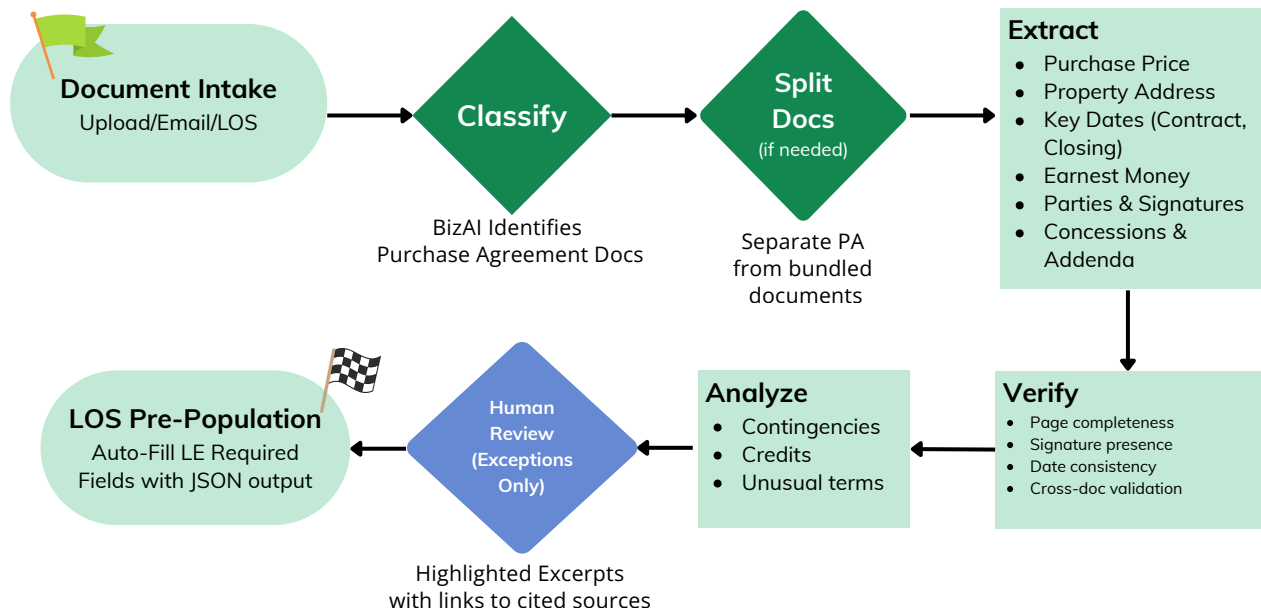

*BizAI adapts to each institution's workflow and content policy—returning structured data for system ingestion without training on or retaining client information.*

## Business Outcomes

Outcome	Result
 <b>Manual review effort</b>	<b>70-80% Reduction</b> in Review & Data Entry Tasks
 <b>Processing time</b>	<b>~40-70 Minutes saved</b> per Purchase Agreement ( X thousands per month!)
 <b>Estimate accuracy</b>	Transfer-tax and fee data calculated at <b>over 95% accuracy</b>
 <b>Revenue protection</b>	<b>Eliminated losses</b> from underestimated LEs
 <b>Consistency</b>	<b>Standardized data structure</b> for LE inputs across markets and brokers

## Updated Process Flow

## Additional Benefits
